

Packed Lunches Student Survey

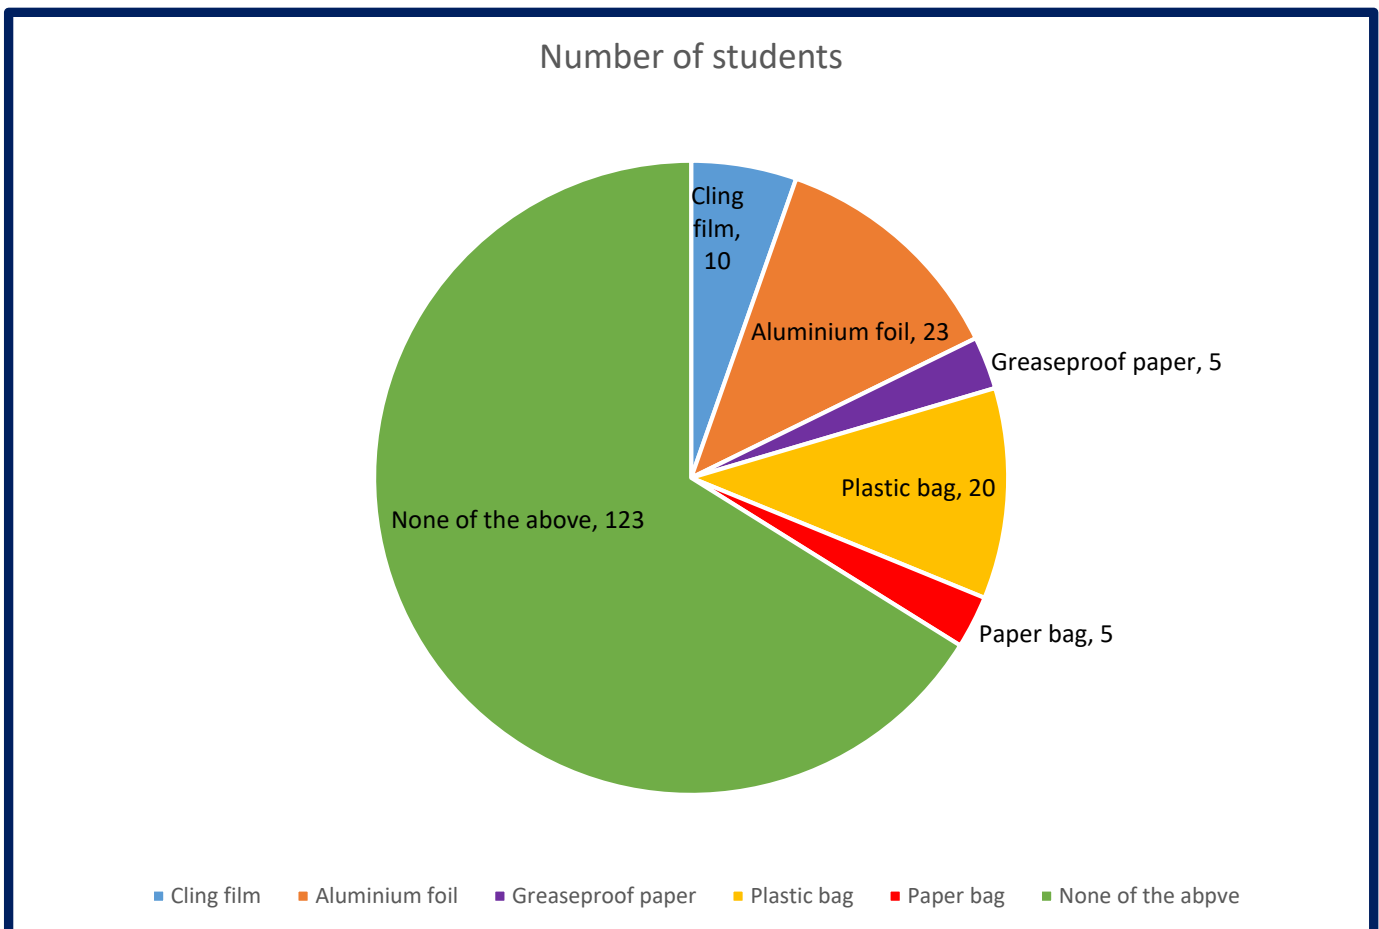

The Eko-Skola committee has embarked on a project aimed to reduce litter. This project is being done in collaboration with the Litter Less Campaign sponsored by Wrigley Company foundation and FEE. The project aims to engage and educate students, and the population at large, on the issue of litter; such that litter and its impact on our environment is decreased.

As part of our project, a student survey was carried out. The 2 minute survey was carried out during the students' ICT lessons. For this reason we would like to thank Ms. Jael Cassar for helping us with the dissemination of the survey and Amy Calleja for uploading the survey questions on to the computers and for collection of results.

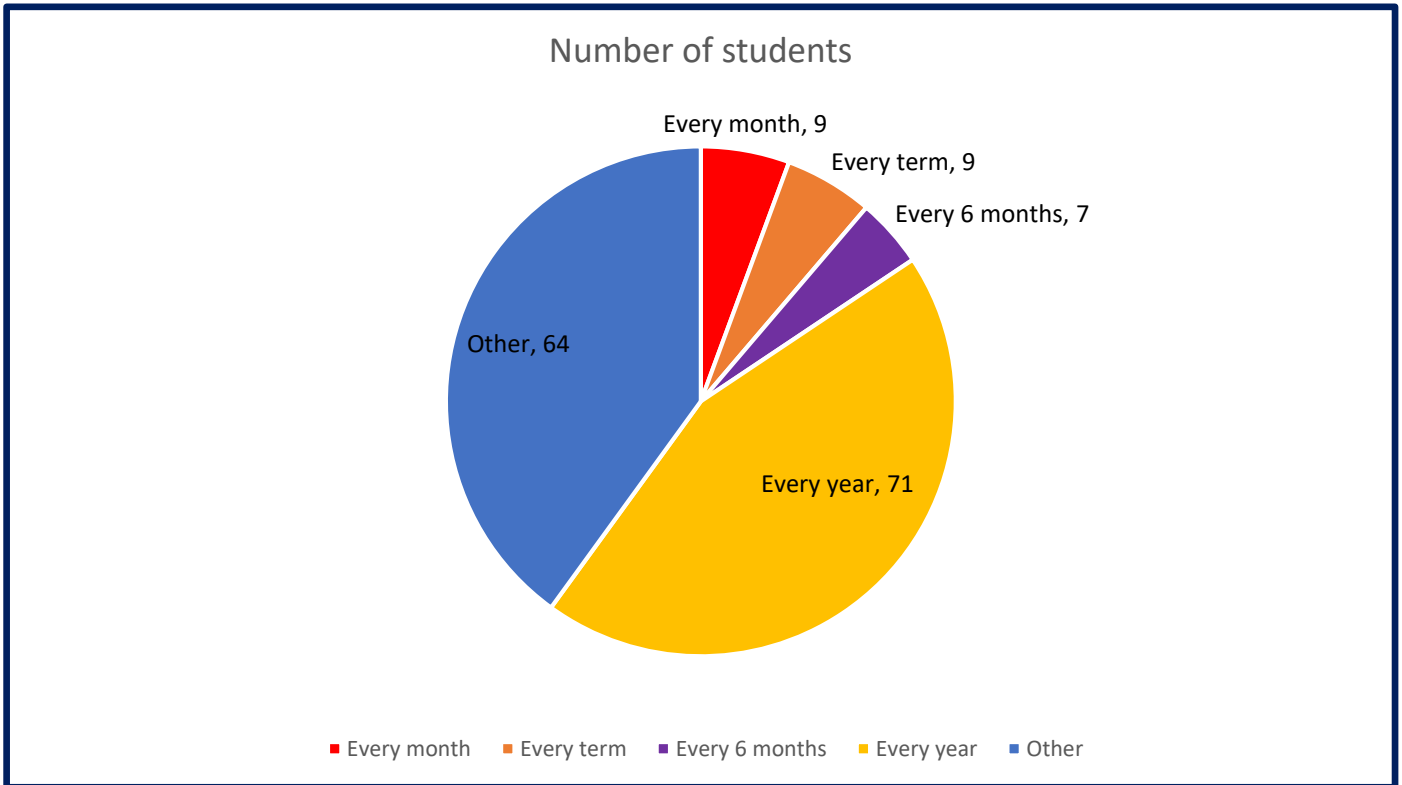

The survey aims to gain information on the lunch packaging utilised by students. A fifth question was set to obtain information on how much of the lunches are being actually eaten by students.

The pie charts below illustrate the results obtained.

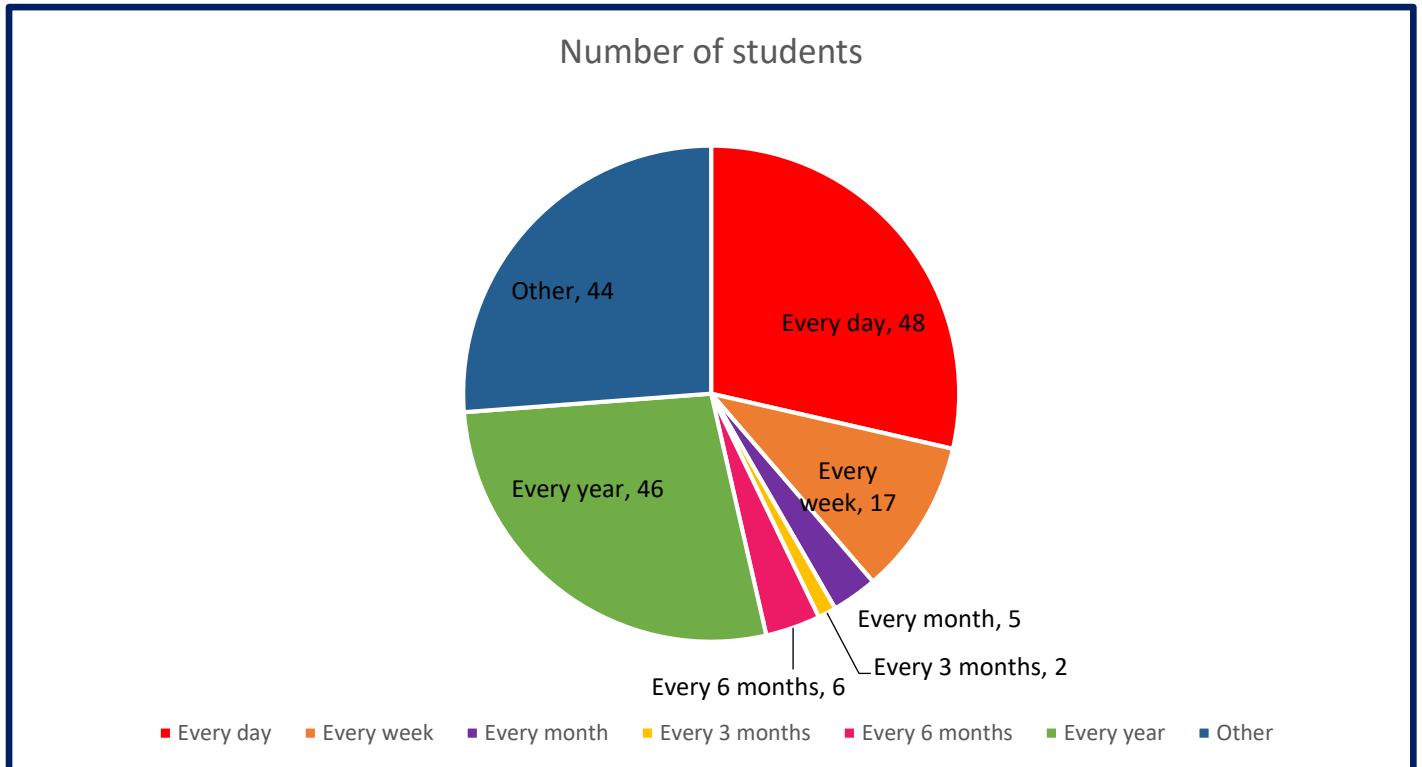

Lunch Packaging

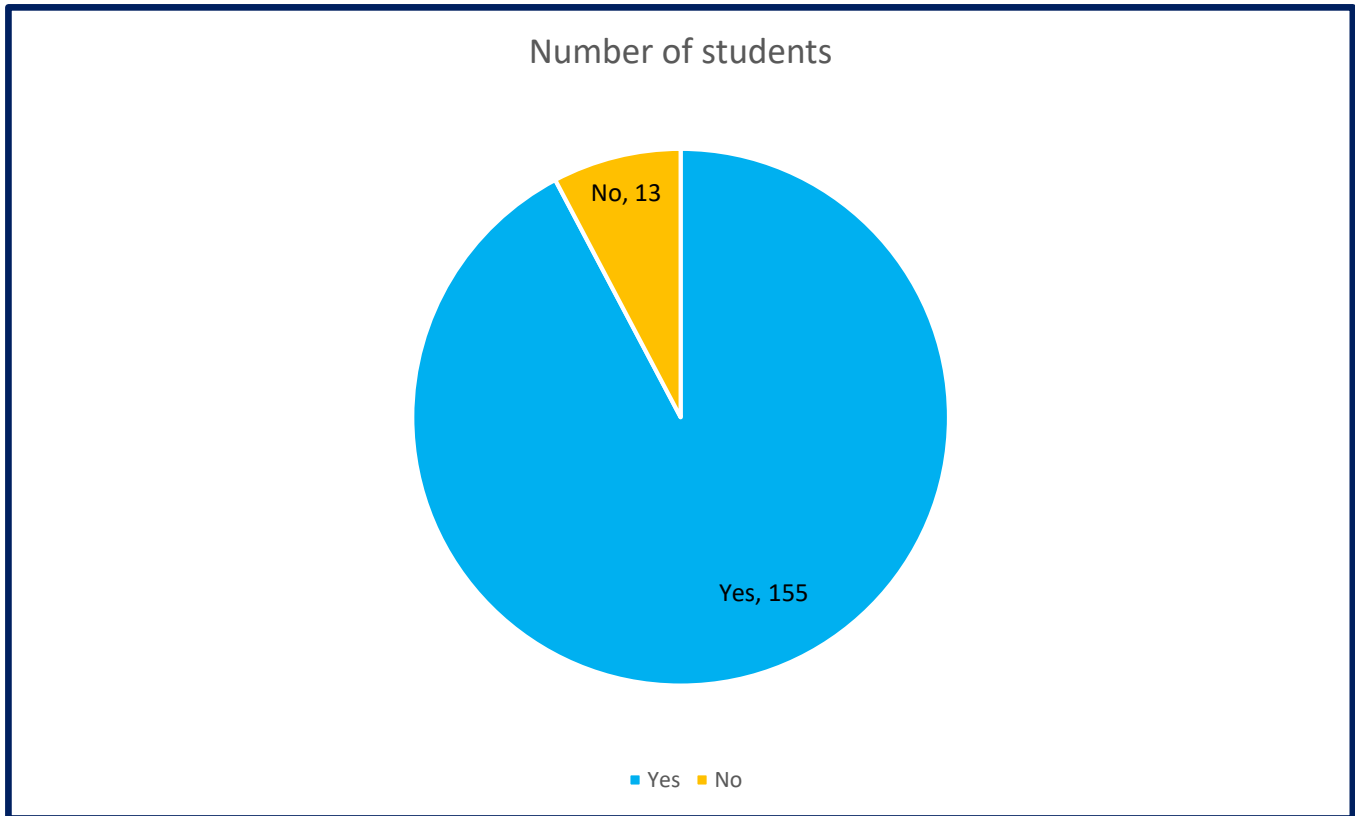

How often do you replace your lunchbox?

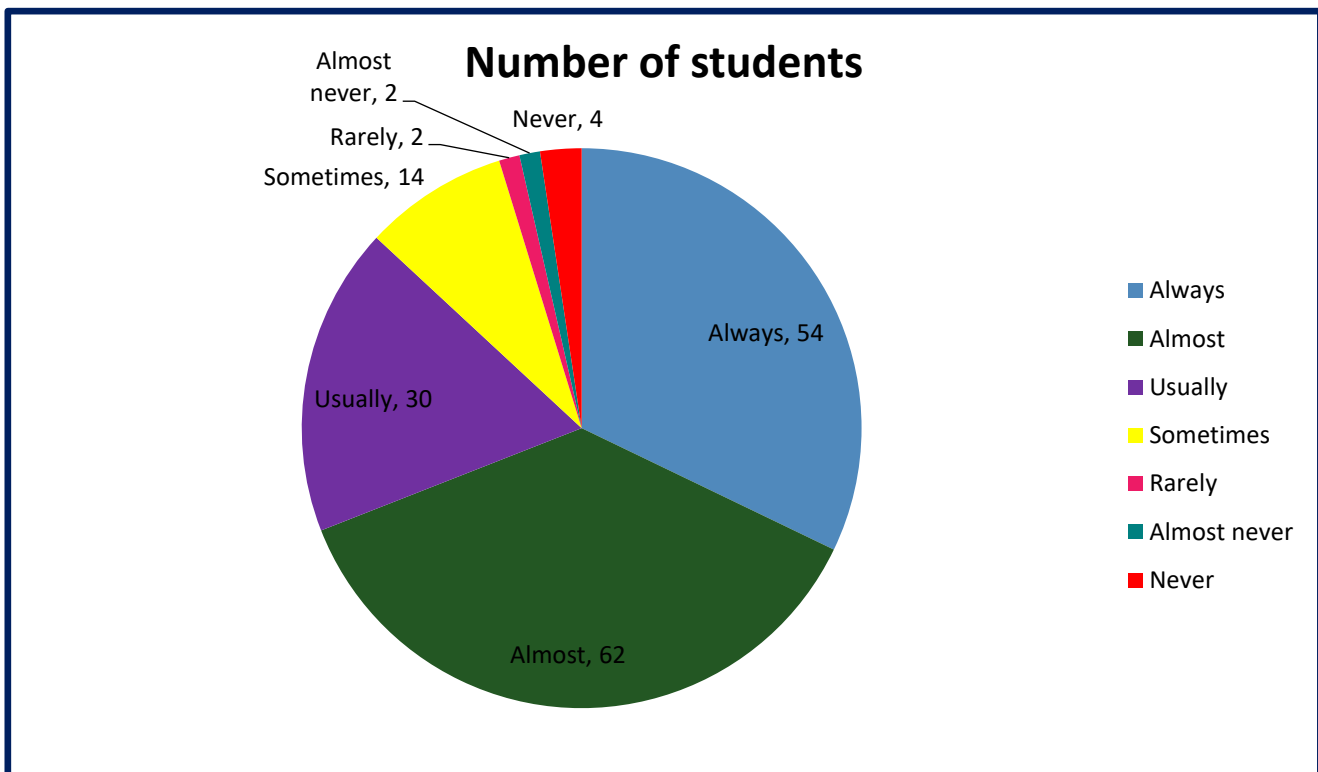

How often do you replace your water bottle?

Do you own a lunchbox?

Do you eat all your school lunch?

The answers to the survey questions will help the committee **plan future activities** to encourage students **reduce plastic, paper and metal litter**. Moreover the issue of **responsible eating** will continue to be stressed within the school community.
